DEVELOPER: Hydrologic Engineering Center; Apr 03, 2010; HEC-RAS is designed to perform one-dimensional hydraulic calculations for a full network of natural and constructed channels. The program is one-dimensional, meaning that there is no direct modeling of the hydraulic effect of cross section shape changes, bends, and other two- and three-dimensional aspects of flow. HEC-RAS (Hydrologic Engineering Center's River Analysis System) is a computer program that models the hydraulics of water flow through natural rivers and other channels. PLATFORM: Windows; LICENSE: GNU General Public License; HEC-RAS is designed to perform one-dimensional hydraulic calculations for a full network of natural and constructed channels. A key element is that all four components use a common geometric data representation and common geometric and hydraulic computation routines. HEC-HMSVersion:4.3.3 Hydrologic Engineering Center; The Hydrologic Modeling System (HEC-HMS) is designed to simulate the complete hydrologic processes of dendritic watershed systems.
